INEEL CERCLA Administrative Record

SUBJECT: Approval to Proceed with Preparation of an Engineering Evaluation/Cost Analysis for the Idaho National Engineering and Environmental Laboratory, Accelerated Retrieval Project Phase II in the Subsurface Disposal Area (EM-WM-04-083)

Background:

The Radioactive Waste Management Complex (RWMC), located in the southwestern quadrant of the Idaho National Engineering and Environmental Laboratory (INEEL), encompasses a total of 72 ha (177 acres) and is divided, by function, into the following three separate areas: (1) the Subsurface Disposal Area (SDA), (2) the Transuranic Storage Area (TSA), and (3) the administration and operations area. The SDA is the original landfill established in 1952 for the shallow land disposal of solid radioactive waste. The RWMC, including the SDA, is undergoing remediation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) (42 USC § 9601 et seq.) in accordance with the *Federal Facility Agreement and Consent Order for the Idaho National Engineering Laboratory* (DOE-ID 1991). The Federal Facility Agreement and Consent Order designates the RWMC as Waste Area Group 7, which is further subdivided into 13 operable units (OU). Operable Unit 7-13/14 is the combined OU for the comprehensive remedial investigation and feasibility study evaluating SDA contamination, risk, and associated remedial alternatives.

The SDA is a radioactive waste landfill with shallow subsurface disposal units consisting of pits, trenches, and soil vaults. Disposals of transuranic (TRU) and mixed waste, mostly from the Rocky Flats Plant in Colorado, were allowed through 1970. The buried Rocky Flats Plant TRU waste is located in certain pits and trenches in the SDA. Contaminants in the SDA include hazardous chemicals, fission and activation products, and TRU radionuclides.

In August of 2004, the U.S. Department of Energy Idaho Operations Office (NE-ID), in consultation with the Idaho Department of Environmental Quality and the U.S. Environmental Protection Agency, Region 10, documented a decision to perform a non-time-critical removal action (NTCRA), referred to as the Accelerated Retrieval Project, to retrieve limited portions of TRU waste within Pit 4 in support of the comprehensive remediation of OU 7-13/14 (DOE-ID 2004). The Accelerated Retrieval Project area of focus includes approximately 1/2 acre of the eastern section of Pit 4. This memorandum documents the NE-ID decision to prepare an engineering evaluation/cost analysis (EE/CA) to evaluate continuing TRU and other targeted waste removal activities within the SDA as a NTCRA referred to as the Accelerated Retrieval Phase II Project (ARP II). The ARP II area of focus includes the remaining portion of the east end of Pit 4 (i.e., remaining portion following the initial ARP retrieval) and the western end of Pit 6.

The CERCLA process requires preparation and public review of an engineering evaluation and cost analysis (EE/CA) before preparation of the action memorandum that will document official selection of the NTCRA alternative and associated details that support the official selection.

Threat to the Environment:

Based on existing site characterization and risk information, NE-ID concluded that source materials located within Pit 4 and Pit 6 contain hazardous substances that have been released to the surrounding environment, and that the release of source materials may continue without remedial action (Holdren et al. 2002). Further, NE-ID concludes that the proposed NTCRA is consistent with relevant National Contingency Plan criteria (40 CFR 300.4 15[b][2][iii]) considering that the area of focus contains "Hazardous substances or pollutants or contaminants in drums, barrels, tanks, or other bulk storage containers, that may pose a threat of release" (40 CFR 300).

If no action were taken (i.e., absent institutional controls or other remedial action), existing OU 7-13/14 risk documentation indicates there may be a potential future threat to the environment from release of hazardous substances previously disposed of in Pit 4.

Enforcement Actions:

No enforcement actions are related to the Accelerated Retrieval Project.

Proposed Project and Cost:

The primary objective of the proposed NTCRA is to retrieve TRU and other targeted waste located within the designated portions of Pit 4 and Pit 6 that contain significant quantities of contaminants of concern identified by the OU 7-13/14 program. Following retrieval, waste will be placed in new containers, staged in an interim storage area, and subsequently prepared, where possible, for transfer to the Waste Isolation Pilot Plant (WIPP) repository in New Mexico.

Based on the focused objectives, alternatives to be considered in the EE/CA are limited to the No Action alternative and the removal of TRU and other targeted waste streams (i.e., in situ treatment options are not included). The No Action alternative is included in accordance with U.S. Environmental Protection Agency requirements for comparative purposes and is limited to a monitoring scenario at the SDA.

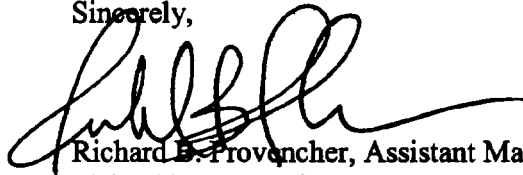

The preliminary cost estimate for retrieval and subsequent management of waste from this portion of Pit 4 and Pit 6 will be developed as part of the EE/CA, as will project schedule information.

February 1, 2005

Approval to Conduct Engineering Evaluation and Cost Analysis:

Approval is hereby given by NE-ID to conduct an EE/CA for the Accelerated Retrieval Project Phase II, NTCRA of Pit 4/Pit 6 of the SDA. The NTCRA and associated activities will be conducted in accordance with the relevant requirements of the National Contingency Plan and pursuant to Section 104 of CERCLA, as provided by Section 2.(d) of Executive Order 12580, "Superfund Implementation" (1987). A signed Action Memo will be required as authorization to proceed with retrieval operations in ARP II. Jeffrey N. Perry is the designated spokesman for this project. The completed EE/CA will be made available for public review and comment.

Sincerely,

A handwritten signature in black ink, appearing to read 'Richard B. Provancher', written over a horizontal line.

Richard B. Provancher, Assistant Manager
Idaho Cleanup Project
